

P&P Poidomani & Puccia

Taglio e lavorazione pietre

Over the last forty years we have been specializing in the manufacturing of different kinds of Sicilian stones and above all the Modica stone. Our business deals with the production of floors and inner and outer coverings (bush hammed, smooth, aged, sandblasted), and any other work on commission or on custom designs.

We also produce:

- street furniture such as: road flagstones, flower boxes, benches and staircases.
- inner and outer furniture for houses, villas and pools (jambs, architraves, cornices).
- slabs of different thickness for marble workers.

ITEMS WE GENERALLY PRODUCE:

Bush hammered: perfect for inner and outer floors. For its non-skid surface it is also used as poolside.

Sandblasted: it looks like a very fine bush hammered type and it is used above all in coverings.

Smooth: our most popular product, it is practically suitable for every project: drawing room floor, big areas such as hotel foyers. It is also ideal for window and door openings, fireplaces, and pillars.

Aged: such a finish has been widely used in the last ten years for its peculiar colour. It appears to look like the natural colouring of old stone monument. Mostly selected for restoration and renovation projects.

Polished: extremely smooth, it is suitable for interiors or as washable surface (kitchen worktops).

Detail of a popular flooring for a big outside area, called "mosaico".

OUR PROJECTS

House made of stone blocks "a spacco di cava" (natural split stone)

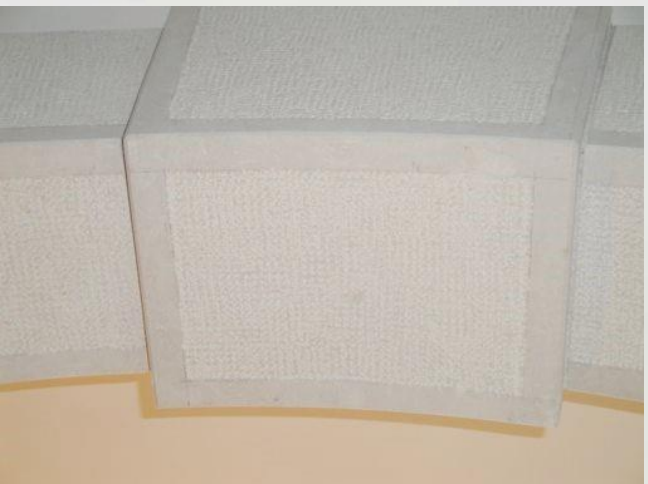

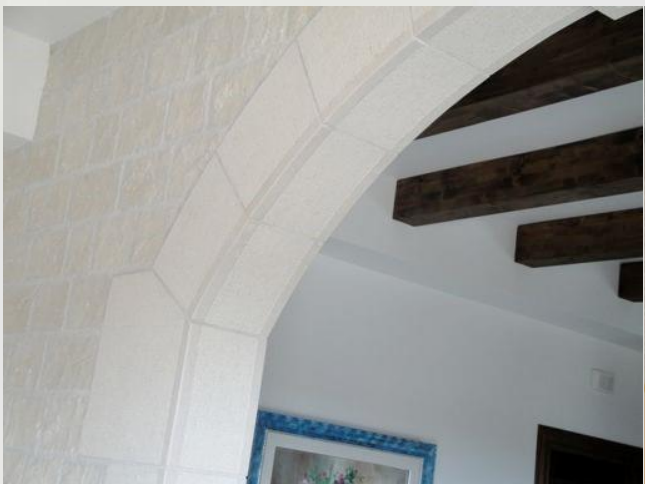

Left: detail of masonry.

Above: detail of a door opening with aged finish.

Arch creating an open space realized with massive handmade blocks; the wall has been covered with little handmade tiles "a spacco di cava" (natural split stone). Below, right: detail of the keystone.

Here the fireplace is not only a low-cost heat source but also an original piece of interior design.

Detail of the log holder niche.

Smooth finish for window opening.

Detail of the windowsill.

Type of pillar covering in country house style.

Examples of little pillars holding the railing.

Building designed in Scicli for a banking company.

Left: pillars covered with smooth blocks where it was possible to create a shady area; the floor is made with aged slabs.
Above: detail of the cornice.

Outdoor fountain.
